Weapons D6 / BlasTech Industries DC-12U B

Name: BlasTech Industries DC-12U Beam Rifle
Manufacturer: BlasTech Industries
Type: Blaster rifle
Scale: Character
Skill: Blaster; Beam Rifle
Ammo: 200
Cost: 1,600 credits
Availability: 2,X
Range: 3-25/60/150
Damage: 2D+2

Equipped With:
- Collapsible stock
- Integrated under-barrel mount (usually mounted with high-powered flashlight)

Description: The DC-12U beam rifle, also known as the SCUBA trooper rifle, was a specialized blaster rifle that could operate underwater. It was a double-barreled blaster that came equipped with a glowlight attachment to provide visibility in dark ocean depths.

Description

Designed by BlasTech Industries for the clone dive troopers of the Grand Army of the Galactic Republic, the DC-12U beam rifle was a heavy, double-barreled weapon developed from an older BlasTech blaster rifle built for use in wet, humid, or swamp-like environments. Equipped with a collapsible stock and an integrated under-barrel mount, the DC-12U fired two low-output blaster bolts with one pull of the trigger and was devastating in the proper hands. The under-barrel mount could also typically be equipped with a high-powered flashlight that provided visibility in the darkest depths of the various aquatic planets' oceans.

As a result of its particular mix of blaster gases and its special focusing elements that were used to optimize underwater operations, the DC-12U fired blue-colored blaster bolts as opposed to the typical red bolts emitted by most weapons. One DC-12U cost 1,600 credits.

History

During the Clone Wars between the Galactic Republic and the Confederacy of Independent Systems, a detachment of clone SCUBA troopers led by Clone Commander Monnk were equipped with these rifles during the Battle of Mon Cala in 20 BBY. DC-12Us were carried by the SCUBA troopers' successors, the Imperial seatroopers, during the invasion of Mon Cala.
