Equipment D6 / Ebla beer

Name: Ebla beer
Cost: 6 credits per 4 pack
Availability: 1

Game Notes: The bottles of Ebla Beer have neon advertising and musical jingles that activate on opening the bottle and continue to play for several minutes until the charge is expended, the neon advertising can be used as a weak source of illumination.

Description: Ebla beer was an alcoholic beverage brewed on the planet Bonadan from Ebla grain. It was sometimes sold in a bottle with an "E" on the side. The Wookiee Chewbacca drank Ebla beer at Bonadan Spaceport Southeast II while he and Han Solo awaited the arrival of Zlarb around 2 BBY. New Republic Starfighter Command Brevet Captain Garik Loran had a mechanism installed in Vape, his R2-series astromech droid, during his time with Wraith Squadron. When a group of keywords was spoken—specifically "Vape: cold one"—the droid would discharge a chilled bottle of Ebla beer. Commander Wedge Antilles was also aware of the modification, and used it to dispense chilled beer for himself, much to Loran's confusion as it should not have worked for anyone but himself. During the Yuuzhan Vong War, Solo and his longtime smuggler friend Roa drunk Ebla beer as a reminder of the old days.
