Description: The First Order used a model of TIE Interceptor. The model of TIE interceptor was used by Major Eirik Vonreg. Vonreg's TIE was used by him during the cold war against T-85 X-wings of the New Republic during their mission to rendezvous with the Resistance, and he later flew it with his squadron against Resistance pilots during the mission to Station Theta Black.

Considered a higher-end model, the modern technology employed by the First Order allowed the TIE to carry a hyperdrive, and was armed with four wing-mounted cannons and a pair of projectile launchers.
