 Broadband broadcast antenna/receiver system
 Internal high-frequency binary comlink
 Photoreceptors (Human range)
 Recharge coupling access port

Move: 8
Size: 1.8 meters tall
Cost: 1,500 (used)

Description: The V-series droid supervisor was a model of supervisor droid manufactured by MerenData. A relaunch of the EV-series supervisor droid marketed towards the Imperial Military, its performance was unimpressive and the model was a financial failure.

Characteristics

A model of supervisor droid, the V-series had similar attributes to its precursor, the EV-series supervisor droid, but also featured a more tolerable personality. It lacked the MDF motivator that was installed in many first-generation EVs, which had increased efficiency at the cost of higher rates of attrition among the droids they oversaw. Despite being equipped with an augmented monitor system, the V-series' performance was unimpressive by comparison.

History

Manufactured by MerenData, the V-series droid supervisor was a relaunch of the EV-series marketed towards the Imperial Military. However, its performance was considered unimpressive and the model failed spectacularly, becoming a financial failure for MerenData.
